

- Post I:
- 1) Attributes
  - 2) Commit
  - 3) Branch
  - 4) Forks
  - 5) Timeline

- Additional attributes:
- 1) Snapshot / Comment about the commit
  - 2) Expected commits
  - 3) Reviewer
  - 4) Files impacted

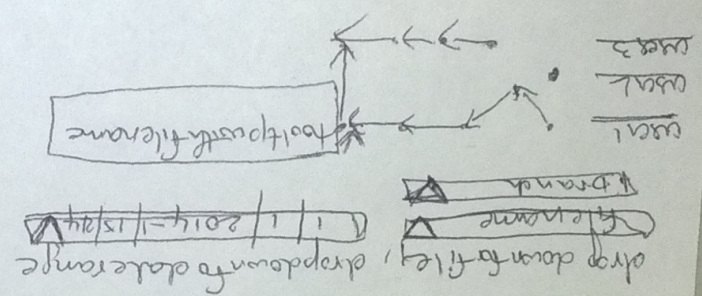

### User Roles

- 1) Contributors: they would like to see who else is working on it
- 2) PM's: would like to see future commit reviews and the

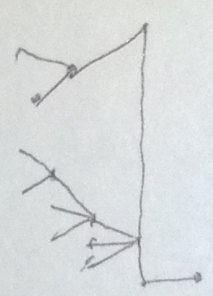

program made on the project.

Design for contributors: I would like to see/show files by files as a contributor is most likely working on a few files and the entire separately.

### Part II:

Group: Part III  
 I parent/root I don't see it  
 and there can be more than  
 one child node-like tree but  
 we don't have a tree layout  
 as I imagine there will be  
 separate trees & hard to determine root  
 but that could mean more trees  
 but that could mean more trees

Note: link tree.

We agreed on  
 hierarchical  
 structure to  
 make data  
 aggregatable  
 as a possible  
 solution.
